

ACCUCAM
MACHINING

CNC MACHINING • PRODUCTION MACHINING
ISO 9001:2000 REGISTERED

Quality Assurance Manager

For over 20 years Accucam has been successfully providing machined component part supply solutions to Off-Road OEMs. From the management team to the production workers, Accucam has a group of experienced and highly qualified individuals with one goal in mind serve the customer's needs.

Accucam is seeking a **Quality Assurance Manager** who will be responsible for our ISO systems, support new product development, oversee quality of materials and finished product, as well as run root cause analysis of product failures and develop corrective action.

Position Summary

The successful candidate will implement and maintain our ISO 9000 and 14000 program, chair and lead our CAR team and maintain our supplier/vendor quality program. The successful candidate will have a well-balanced background that includes strong leadership abilities, experience with product quality management, people management experience, and a proven ability to manage highly complex projects in a multi-discipline, fast paced environment.

Responsibilities/Detailed Duties

- Interface with Engineering, Manufacturing, Supply Management as well as other related functions to achieve high quality products;
- Plan and implement established quality assurance programs, updating as necessary to comply with new specification and contractual obligations;
- Demonstrate full knowledge of ISO Standards and understanding of all applicable customer standards;
- Develop product quality yields, audits, surveillance, certification systems, quality plans, schedules and prepare and provide data for management review;
- Establish and perform Cost of Quality analysis and NCR procedures;
- Review and approve supplier PPAP's;
- Review and submit PPAP's to customer;
- Participate in department meetings pertaining to standards and processes;
- Works closely with floor personnel on quality concerns, able to address quality issues using 8D, 5 why's format;
- Develop and maintain good working relationship with suppliers and customers;
- Propose opportunities for continuous improvement.

Education/Experience

- 7-10 years of QA experience including 5+ years of management in a manufacturing environment
- A Bachelor's degree in Mechanical Engineering or equivalent;
- 5 to 7 years of experience in Quality Assurance;
- Experience in a management role;
- Experience in a manufacturing and quality system environment;
- Proficient in Microsoft Word, Excel and Outlook
